Cyber Security Training

OCDTECH

A Division of O'Connor & Drew P.C.

Highly-Experienced. Deeply-Knowledgeable. Actively-Involved.

Cyber-attacks have become a daily occurrence in this digital age. It is more important than ever to ask: What is your company doing to limit its exposure to these malicious attacks? The losses resulting from an attack can be hard to determine because often, these attacks are identified days, or even weeks after they occur. Determining how much money is stolen may be a trivial exercise, but how does one measure negative reputational impact? The weakest link in any company's security disposition is a lack of employee awareness. Proper employee awareness training can help prevent a single employee from compromising the entire organization.

IT Security and Audit Experts.

As the internet has evolved, so have cyber attackers. These hackers have fine-tuned their craft so they are more difficult to detect. OCD Tech's Cyber Security Training will better prepare your employees to recognize malicious activity such as phishing campaigns or reconnaissance from an attacker.

Our team has global experience with banking, financial institutions and health care related IT controls with a strong focus on regulatory compliance areas and employee training and awareness.

At OCD Tech, IT Audit & Security Assurance is all we do. Our team reviews actionable intelligence and changes to regulatory bodies to bring the most relevant and timely recommendations to our clients.

Our training topics:

- IT audit basics
- Security controls best practices
- Protecting your company and its data
- Avoiding social engineering and phishing attacks
- Understanding Denial-of-Service attacks
- Securing your emails and social networking
- Mobile device security best practices
- What to do if you are attacked

Committed. Proactive. Responsive.

OCD Tech is committed to providing first-rate proactive client services based on each organization's complex needs. All client engagements are closely supervised by one of our managers who have the sophisticated knowledge and the in-depth understanding of the banking, financial services and health care industries. Managers work with a highly-experienced and well-trained team of IT audit and security consulting professionals.

Contact any of our IT experts at 617.471.1120 to discuss how we may help your organization succeed.
